

Case Study:

Radio 24-Syv

5 doors and 9 acoustic windows installed
at Radio 24-Syv in Copenhagen

“The facilities are robust and reliable, allowing the radio channel to function around the clock without the distraction of office and traffic noise.”

Radio 24-Syv is a privately owned public licensed 24 hour Talk Radio station in Copenhagen, broadcasting news and current affairs.

Program Editors & Producers create daily and weekly culture, science and debate programs.

Based within a busy main street in Copenhagen, Radio 24-Syv is surrounded by emergency vehicles and noisy traffic congestion. Radio 24-Syv found it vital that their studios were completely free of background noise, from both external and adjacent sources. IAC Acoustics was

commissioned to design and install 5 doors and 9 windows based on Radio 24-Syv's design criteria for size and finish. IAC modified the drawings from the advisory acoustician and

architects to insure the components fitted acoustically into the studios' room-in-room construction. IAC also ensured the doors and windows were installed correctly, to allow an optimal acoustic environment.

As a result, Radio 24-Syv has 4 recording studios to professional broadcast standard, with aesthetic, reliable and robust quality enabling 24 hour broadcasting without noise control issues.

Steen Niebling at Radio 24-Syv commented, "I am more than satisfied with the studios that IAC Acoustics installed at our radio station. The acoustic studios now provide us with the environment we need to broadcast our station across the country, without the disruption of outside noise."
